Belgian Blue, known for its exceptional double muscling, gives very high meat yield with low fat and bone content. Often used as a crossbreeding sire to raise carcass value in commercial herds.

Specifications

Category	Beef cattle
Presentation	Live animals
Condition	Live animals
Origin	Confirmed per order
Age, sex, weight	Agreed per request and confirmed in the quotation
Health & certificates	Veterinary tests and export health certificate according to the destination's requirements
Delivery	Live animals are traded separately from meat. Veterinary, transport and welfare requirements are checked for each destination.

Frequently asked questions

Why is Belgian Blue used for crossbreeding?
Its muscling passes on to crossbred calves, increasing meat yield per animal. Breeding management and calving support should be planned at destination.
